

Opening a standard tilt 'n' turn window wide usually means clearing the windowcill or even taking down curtains. These handsome, functional windows are different. They simply slide open vertically, while the clever reversible mechanism means your customers can rotate the sash part of the window without it intruding into their living space.

The result is a window that's perfect for anyone who needs to clean hard-to-reach windows from inside their property. All our fully reversible windows are produced using the industry-leading REHAU S706 profile.

Specify windows from Euroglaze and you get more than thirty years of experience from one of the country's top manufacturers of uPVC windows, doors and conservatories. Our range of windows includes casement, tilt and turn and fully reversible styles, all built using industry-leading REHAU profiles. Whatever the job, whatever the property, we've a style to suit.

We've invested in the latest technology, lean manufacturing processes and workforce training to provide the best possible product quality and customer service. In fact

our obsession with quality means that only 0.3% of our products are rejected either internally or externally, and we're working hard to reduce that figure even further.

We're equally fanatical about making sure all our products and orders are supplied right first time and that dealing with Euroglaze is a stress-free experience. Add to that our industry-leading Marketing Support Package with its high quality literature and website designs, and our commitment to total customer satisfaction is clear.

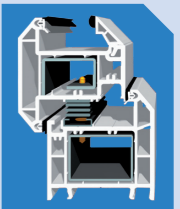

Profiles

Not only have we been making uPVC windows and doors for over 30 years, we're also REHAU's longest standing UK fabricator. The length and strength of our relationship speaks for itself. In terms of profiles, we stock a comprehensive range of the market-leading 70mm REHAU system in both the fully chamfered S706 suite and the fully sculptured Edge suite. Whatever your customers are looking for, the chances are we can help.

S706

The clean, stylish lines of the S706 profile make it the number one choice for many people. It's not just attractive though, the S706 also has a proven record of performance and is ideal for any job – from a small fixed light to glazing an entire building. It's also 100% compatible with the REHAU fully reversible system and structural products that help with commercial specifications.

Edge

The beautiful REHAU Edge system is a fully sculptured suite of 70mm profiles. It offers curved sightlines – perfect for situations where customers want to soften the appearance of the frames in their home. Like the S706 system, Edge maintains the very highest standards of strength and quality.

Rauferno Fire Rated Frames

The dramatically named RAUFERNO system is designed to offer 30 minutes protection from fire, and in an emergency situation could literally mean the difference between life and death. Euroglaze is proud to be one of just a handful of manufacturers who fabricate windows to this exacting standard.

CERTASS A Rated Frames

Our products are tested and certified by CERTASS. Fabricated with the correct specification glass they can achieve the coveted "A" rating.

Secured by Design

Our involvement in the commercial market has led us to develop a range of products that meet the gruelling Secured by Design standards, an initiative developed by the Police. With their toughened screws, thicker gauge steel and corner reinforcements, these super-sturdy frames really are significantly stronger than standard frames. They're tested to withstand thousands of Newtons of force, making them tough enough to cause even the most persistent thief look for another target.
